5. (canceled)

6. (canceled)

7. (currently amended) A bedsheet retainer system for retaining bedsheets
comprising:
a slat around which bedsheets are wrapped;
at least one clip to clip to said slat;
said slat being separate and distinct from said clip;
said slat consisting of a plurality of interconnected slat segments connected in a
male-female fashion by way of a slat tab protrusion received within a socket.

8. (previously presented) A bedsheet retainer system for retaining bedsheets as in
claim 7 wherein:
said clip having a ratchet cooperating with a pawl and said pawl further comprising
a depressable button to selectively disengage said pawl from said ratchet;
handles moving around an axis;
a biasing means set around said axis to bias said handles;
jaws situated opposite said handles and cooperating with said handles to hold said
slat and said bedsheets.

9. (previously presented) A bedsheet retainer system for retaining bedsheets as in
claim 8 wherein:
said button having a button axis and a button biasing means so that said pawl can
return to said ratchet;
said ratchet allowing said jaws to retain a degree of closure while being
releasable so as to free said bedsheets.
